

	ENGLISH NAMES	ALTERNATIVE ENGLISH	DESCRIPTION	ULITHIAN	WOLEIAN / SATAWALLESE
A	<u>Adze</u>	hafted adze	metal blade lashed to a crook necked wooden handle	<i>puchigul</i>	dala tela / <i>puchigul</i>
A.1.	haft	handle; helve	entire wooden handle; all parts not made of metal or rope		<i>yaashe / yach</i>
A.2.	shaft	leg	long thin straight portion of the haft; includes the grip but excluding the heel, foot and toe		<i>yshaale / yachal</i>
A.3.	grip		where the shaft is held when swung; lower portion of the shaft		<i>humushuule / gumchul</i>
A.4.	heel	shoulder throat; interior shoulder; interior	upper or rearward part of the foot; the exterior point where the shaft and the foot form an angle		<i>mangol (same)</i>
A.5.	toe angle	neck	internal angle between the shaft and the toe		<i>mwegoule (yuyal)</i>
A.6.	toe		flat surface parallel but opposite to the blade; extrusion beneath the blade that anchors or limits lashed rope from sliding off in direction of the cutting edge		<i>rumwuule (chemal)</i>
A.7.	foot	seat	top surfaces onto which the blade is affixed; generally parallel to the toe; extends from above the toe back to the heel		<i>haatoulu paashe (hagolgolol)</i>
	xxxx		top surface (foot) from the point at which it protrudes downward in which the blade rests, toward edge, above the toe		<i>rumwuule haatou</i>
B	<u>Blade</u> cutting				
B.1.	edge	edge	lower portion of the blade; all the area below the butt		<i>metaale / metal</i>
B.2.	bevel		thin sharpened portion of the cutting edge that makes contact with wood		<i>metaale / metal</i>
B.3.	blade edge		outer tips of the cutting edge; furtherest points left and right that strike wood		<i>gaatile</i>
B.4.	sweep		curvature of the cutting edge seen as a cross section; may include lips that flare downward		<i>hulhul</i>
B.5.	butt		upper portion of the blade; all the area above the cutting edge; includes shoulder, tang, poll and lug		<i>shaapale / ungul</i>
B.6.	shoulder	butt shoulder	lower portion of the butt; start of bend in blades not laterally flat; area where tang and or lug start		<i>yaaferale / yafra</i>
B.7.	tang	neck; nose	indentation or recess relative to the rest of the butt; used to strengthen connection between blade and handle		<i>sowaale potil / sowa</i>
B.8.	lug		projection outward on the butt; used to strengthen connection between blade and handle		<i>rumwuule</i>
B.9.	poll		the upper end or top edge of the blade		<i>topeol / hapil</i>

Larry, we are working on a handout that describes the adze blades. It has english and woleain names for all the parts of the blade, which you helped so much with when you were visiting. I am missing one though.

The blade laying flat on a table, and you looking down at it, there is a curve to the cutting edge. This is NOT the sweep (or hulhul).

What is the name for the "curve"?

MON 5:58 PM

7:45 PM

Great. Thanks

Faatile

faatile is the corner, metaale is the front and wesheele is the bevel

TUE 7:45 PM

Great. Thanks

Is there any term for the curve itself? Like in consideration of how some are flat, curved and more pointed?

The design

The design is a combination of the old ~~tool~~ ~~to~~ make from shell (giant clam) but modified to have the "tang"
